## EDUCATION

---

### Pennsylvania State University, Berks

*B.S. Cybersecurity Analytics and Operations*

Reading, PA

*Aug. 2026 – Expected Dec. 2028*

### Thaddeus Stevens College of Technology

*A.S. Software Engineering*

Lancaster, PA

*Aug. 2024 – May 2026*

**Certifications:** CompTIA Security+ · CompTIA CySA+ · CompTIA CSAP

**Activities:** Berks IST Club, Member · PSUCCSO Red vs. Blue 2026, Blue Team

## EXPERIENCE

---

### IT User Support

Aug. 2026 – Present

*Pennsylvania State University, Berks*

*Reading, PA*

- Troubleshoot hardware, software, and **Wi-Fi** authentication issues across Windows, macOS, iOS, and Android for students, faculty, and staff
- Diagnose account access issues (authentication failures, cookie conflicts) and mobile ID/**NFC** credential problems, issuing temp passwords and restoring access
- Decommission retired computers, sanitizing drives via bootable **USB** media before reissue or disposal
- Support classroom and campus **AV**/connectivity systems, resolving equipment issues at events and facilities
- Log and resolve support requests in **ServiceNow**, following escalation procedures for complex cases

### Software Engineering Tutor

Aug. 2025 – May 2026

*Thaddeus Stevens College of Technology*

*Lancaster, PA*

- Taught **Python**, **Java**, web development, and backend concepts through one-on-one and group instruction
- Guided students through root-cause debugging methodology, improving problem-solving skills
- Communicated technical concepts to students of varying experience, improving comprehension and confidence.

## SECURITY PROJECTS

---

### Apollo Blue Team Toolkit | *Bash, Debian 12, BIND9, OpenSSH, UFW, systemd*

PSUCCSO Red vs. Blue 2026 — **3rd of 6 teams overall, 1st in service uptime**

Sep. 2026

- Defended a Debian 12 server (SSH, DNS, distcc, web admin) against a **live red team** in a scored competition
- Wrote a **Bash** toolkit that hardens services with config validation and **auto-rollback** to protect uptime
- Built **baseline-diff detection** that snapshots known-good state and flags new accounts, sudoers changes, SSH keys, cron jobs, SUID files, listeners, and processes without signature rules, with a live dashboard and **systemd** background collector
- Built an **audit-logged console** to lock accounts, kill sessions, remove persistence, and block attacker IPs
- Debugged OpenSSH drop-in precedence by verifying effective config with **sshd -T**

### SOC Homelab | *Proxmox VE, Splunk Enterprise, Sysmon, Windows 10, Ubuntu Server*

- Built a segmented multi-VM SOC lab in **Proxmox VE**, isolating lab traffic from management networks
- Deployed **Splunk** with Universal Forwarders on Windows and Linux endpoints; tuned **Sysmon** telemetry
- Simulated attacks (**Nmap** scanning, **Hydra** SSH brute force) from a Kali Linux VM and built/validated **SPL detection rules** for inbound port scans and SSH brute force, confirmed firing end-to-end against live attack traffic
- Added a correlation rule flagging successful SSH login after brute force (SPL **streamstats**)
- Root-caused a missing-data gap to a Windows hostname mismatch through structured troubleshooting

### TryHackMe | *Jr. Penetration Tester Path & SOC Level 1 Path*

- Completed Jr. Penetration Tester and SOC Level 1 paths (web app attacks, **Burp Suite**, privilege escalation)
- Triaged phishing alerts in the SOC Simulator, classifying true/false positives from headers and URLs

## TECHNICAL SKILLS

---

**Security Operations:** SIEM (Splunk), Log Analysis, Alert Triage, Incident Response, Linux Hardening

**Tools & OS:** Splunk, Sysmon, Wireshark, Nmap, Git | Windows 10/11, Ubuntu Linux

**Networking & IAM:** TCP/IP, DNS (BIND9), DHCP, HTTP/HTTPS, Active Directory (Users/Groups, GPO)

**Programming & Virtualization:** Python, Java, Bash, SQL, JavaScript | Proxmox VE, VirtualBox
