EDUCATION

Pennsylvania State University, Berks

B.S. Cybersecurity Analytics and Operations

Reading, PA

Aug. 2026 – Expected Dec. 2028

Thaddeus Stevens College of Technology

A.S. Software Engineering

Lancaster, PA

Aug. 2024 – May 2026

Certifications: CompTIA Security+ · CompTIA CySA+ · CompTIA CSAP

EXPERIENCE

IT User Support

Pennsylvania State University, Berks

Aug. 2026 – Present

Reading, PA

- Troubleshoot hardware, software, and network issues for students, faculty, and staff
- Diagnose account access issues (authentication failures, cookie conflicts), issuing temp passwords
- Troubleshoot **Wi-Fi** authentication and connectivity issues across Windows, macOS, iOS, and Android devices
- Assist students with mobile ID/**NFC** credential issues to restore physical access and identity credentials
- Decommission retired computers, sanitizing drives via bootable **USB** media before reissue or disposal
- Support classroom and campus **AV**/connectivity systems, resolving equipment issues at events and facilities
- Log and resolve support requests in **ServiceNow**, following escalation procedures for complex cases

Software Engineering Tutor

Thaddeus Stevens College of Technology

Aug. 2025 – May 2026

Lancaster, PA

- Taught **Python**, **Java**, web development, and backend concepts through one-on-one and group instruction
- Guided students through root-cause debugging methodology, improving problem-solving skills
- Communicated technical concepts to students of varying experience, improving comprehension and confidence.

Garden Associate

The Home Depot

Jul. 2024 – Present

Wyomissing, PA

- Managed inventory accuracy and customer service in a high-volume, fast-paced retail environment

SECURITY PROJECTS

SOC Homelab | *Proxmox VE, Splunk Enterprise, Sysmon, Windows 10, Ubuntu Server*

- Built a segmented multi-VM SOC lab in **Proxmox VE**, isolating lab traffic from management via separate network segments
- Deployed **Splunk Enterprise** with Universal Forwarder across Windows and Linux endpoints; tuned **Sysmon** (SwiftOnSecurity config) for process, network, and file I/O telemetry
- Integrated rsyslog for Linux log forwarding into Splunk, centralizing endpoint visibility across the lab
- Simulated attacks (**Nmap** scanning, Hydra SSH brute force) from a Kali Linux VM and built/validated two SPL detection rules for inbound port scans and SSH brute force, confirmed firing end-to-end against live attack traffic
- Root-caused a missing-data gap to a Windows hostname mismatch through structured troubleshooting

TryHackMe | *Jr. Penetration Tester Path & SOC Level 1 Path*

- Completed Jr. Penetration Tester and SOC Level 1 paths, covering web app attacks and privilege escalation
- Used **Burp Suite** (Proxy, Repeater, Intruder) to test for SQL injection, XSS, and broken access control
- Triaged phishing alerts in the SOC Simulator, classifying true/false positives from headers and URLs

TECHNICAL SKILLS

Security Operations: SIEM (Splunk), Log Analysis, Alert Triage, Endpoint Monitoring, Incident Response

Tools & OS: Splunk, Sysmon, Wireshark, Nmap, Git | Windows 10/11, Ubuntu Linux

Networking & IAM: TCP/IP, DNS, DHCP, HTTP/HTTPS, OSI Model | Active Directory (Users/Groups, GPO)

Programming & Virtualization: Python, Java, SQL, JavaScript | Proxmox VE, VirtualBox
